

SUSTAINABLY-FOCUSED PRODUCTS

Dennis Paper & Food Service is committed to sourcing and offering the best possible eco-friendly product options. Finding the right fit for your operation starts with understanding the variety of different product options available.

Considering greener products for the first time? it's helpful to be aware of how these products can be mindfully disposed of to reduce your operation's, and your customer's, impact on the planet. Are you looking for packaging that can be reused again and again? Products that can be recycled after they're used? Or, single-use disposable product that are compostable?

Here's a breakdown of the most common eco-friendly, sustainable materials.

PET: PET is an FDA approved, sturdy, leak resistant, and recyclable material, ideal for cold foods.

CPET: This is a crystallized form of PET, which allows the material to be freezer and oven-friendly.

PCR PET: Post consumer recycled PET, helping to further reduce waste.

PLA: Made from corn starch, looks and feels like traditional petroleum-based plastic, but products made from PLA are biodegradable and compostable.

Polypropylene: Recyclable, mineral filled material designed to reduce the container weight and cost.

Molded Fiber Pulp: Products are made of biodegradable plant fiber pulp. This material is often a sugar cane manufacturing byproduct known as Bagasse, a renewable material that is certified BPI compostable.

FABRI-KAL:

Fabri-Kal is committed to producing packaging in the safest and most environmentally responsible way possible. From their use of innovative materials to their ability to reduce unnecessary packaging through design and manufacturing advances, they push the envelope every day.

They're a leader in the use of next-generation eco-friendly materials, including post-consumer recycled PET and plant-based resins. Their Kalamazoo, Michigan, plant was honored with the U.S. Green Building Council's LEED® Silver certification in 2010. And they're proud to have also earned a partnership recognition from SmartWay Transport, the leader in green transportation.

From conscious manufacturing practices, to responsible use of materials they're striving to be the best they can be. And to produce packaging that's as right for the planet as it is for your brand.

GENPAK:

Genpak services the retail, food processing, and food service industries with a large portfolio of products. Genpak produces some of the highest quality food packaging available on the market today. Their manufacturing scope ranges across 10 different rigid packaging substrates along with 6 kinds of flexible packaging materials. Those material options are constantly being improved upon in terms of quality and aggressive environmental stewardship goals.

Genpak takes environmental stewardship very seriously. They always meet and often times exceed state and federal environmental regulations regarding our manufacturing profile. Each facility also undergoes their own, internal environmental stewardship program focusing on aggressive energy savings, recycling and efficiency programs. Many times our own internal stewardship goals are far more reaching than mandated programs.

BERKLEY SQUARE:

Years ago, Berk Paper recognized the need for greener alternatives to the traditional plastic cutlery and Styrofoam plates. And, with that, a relentless worldwide search for the right solution began. Shortly thereafter Berk launched their Environ line, complete with cornstarch cutlery and a host of plate, bowl, and clamshell container options.

VEGWARE:

Vegware is a manufacturer and visionary brand, the global specialist in plant-based compostable foodservice packaging. Their extensive range of eco catering disposables offers quality environmentally-friendly products at competitive prices. Their award-winning hot and cold drink cups, takeout boxes and food containers are made from renewable, lower carbon or recycled materials, and can all be composted with food waste where accepted. Customers love the look and feel of our premium eco-friendly materials, as well as being part of a sustainable, circular economy.

WORLD CENTRIC:

World Centric® envisions a thriving world and exist to be of service to the planet and people. At World Centric® they try their best to protect the earth's ecosystems and natural resources for generations to come. The proof is in the products they sell, how they run their business, what they do with our profits and the values they hold.

World Centric® compostable products are lighter impact alternatives to everyday plastic and Styrofoam disposables. They use less energy and water to manufacture and cause less pollution overall than petroleum-based products. They come from renewable resources and waste materials.

21613	STRAW 7.75" JUMBO BLK PAPER	EMPRESS EARTH

BAMBOO:

As more and more consumers look for everyday products that are environmentally responsible, the emergence of bamboo products on the world's markets offers customers a chance to reduce the catastrophic environmental effects of clear-cutting and deforestation. Bamboo is the single fastest growing species of plant on the planet with some species growing more than a meter a day. In sharp contrast to trees which require decades to recover from harvesting, bamboo reaches maturity in 3 to 5 years or less and when it is cut, the stem is left in the soil to sprout a new shoot and start the growing process again.
